All names, child identifiers, dates, results, and video content shown here are deterministic sanitized pilot data. Real child data is disabled in the captured environment.

HELP Review Pilot

Educator happy path

1

The journey at a glance

The application always exposes the next valid action. Educators select an assigned child, submit one private observation, review every suggestion, and deliberately lock the final record.

— DECISION OWNERSHIP

Before starting: confirm the child is assigned, processing permission is approved, and the observation is a supported MP4, WebM, or MOV file. The local pilot policy accepts one video up to 100 MB and five minutes.

Sign in as an Educator

The captured sandbox uses approved staff profiles. A configured email/password environment instead shows the provisioned credential form.

What to do

Select **Alex Morgan**, the sanitized Educator profile with assigned children.

What happens

The server creates an Educator-scoped session and opens **Assigned children**. The session controls which children and assessments can be viewed.

Check before continuing

- Your name appears in the application header.
- The current navigation item is Children.
- The sanitized-data banner remains visible in the pilot.

Access is provisioned. There is no public signup path. Contact the pilot administrator when access or assignments are missing.

Choose an assigned child

The first screen is a focused roster, not a dashboard. Each row shows the child's current assessment state and the authoritative next action.

Example: Child 1001 has a Draft, Child 1024 is In Review, and Child 1048 is waiting for processing permission.

What to do

Use the local search when needed, then select **Child 1001** to open the child record. A status action can also resume the current assessment directly.

What to check

Confirm the child identifier and context before proceeding. Only currently assigned children should be visible.

Status-aware actions prevent dead ends. Draft goes to intake, Processing goes to status, Ready for Review goes to review, and In Review resumes unfinished decisions.

Open the record and begin

The child record keeps age, IFSP context, and assessment history together so the educator can orient before adding a new observation.

Sanitized pilot sandbox. Real child data is disabled.

Observation Jul 11, 2026 Updated Jul 14, 2026, 9:00 AM	In Review Finish review →
Observation Jul 6, 2026 Updated Jul 14, 2026, 9:00 AM	Ready For Review Start review →

Primary action: Upload observation starts a new assessment for this assigned child.

What to do

Review the child header and recent history. Select **Upload observation** when the new video belongs to this child.

What the history tells you

Each assessment row shows its state and next action, making drafts, processing runs, reviews, and failures easy to distinguish.

Stop if the context is wrong. Return to Assigned children instead of uploading an observation to the wrong record.

Verify the video upload

Intake binds one observation date and one private video to the assessment draft before any analysis can start.

Sanitized pilot sandbox. Real child data is disabled.

2 Observation video

UPLOAD COMPLETE

synthetic-observation.mp4

0.1 MB · private assessment video

Replace

Save and exit

Start processing

1 Private by default

The video is shared only with the authorized scoring service and assigned educator.

1 Upload verified

The file remains in this assessment draft.

2 Analysis runs

You may leave while suggestions are prepared.

3 Human review

You decide every final HELP credit.

Ready state: the date is locked, permission is approved, and the uploaded filename is shown as complete.

What to do

Confirm child, age, permission, and observation date. After the video says **Upload complete**, select **Start processing**.

Available controls

Replace or remove the uploaded video before processing. **Save and exit** keeps the verified draft for later.

Private by default. The video is available only to the authorized scoring service and assigned educator; it is not a public asset.

HELP Review Pilot

Observation upload

6

Let processing run

The status page separates upload, security, analysis, and review readiness so progress is visible without implying success too early.

Current state: upload and security checks passed; analysis attempt 1 is still running.

What to do

Wait for the page to update automatically, or use **Refresh status**. You may safely return to children while processing continues.

What the system does

It preserves a processing attempt, validates the result, and exposes review only after an all-or-nothing valid result is ready.

No open browser required. Closing or leaving this page does not cancel analysis.

Start professional review

A successful run reports how many suggestions were validated and how many require an independent score before the review workspace opens.

Example result: 8 validated suggestions, including 2 that need independent educator review.

What to do

Select **Start review**. Returning to children remains safe if the review must happen later.

What to check

All four milestones show complete: upload, security, analysis, and review readiness.

Orient in the workspace

Suggestions are grouped by draft credit on the left. Secure video, child context, and the active decision editor remain available on the right.

Sanitized pilot sandbox. Real child data is disabled.

EDUCATOR CREDIT

+	+/-	-	N/A
Present	Emerging	Not observed	N/A

Action: select What the AI noticed under the current suggestion.

Use evidence as a pointer

Seek to the indicated moment, watch enough surrounding context, and decide whether the behavior supports a credit.

Model uncertain

An uncertain item has no proposed final credit. The educator must choose Present, Emerging, Not observed, or N/A independently.

Professional judgment wins. Evidence text helps locate the behavior; it does not replace watching the observation.

Save the final credit

The editor records the educator-owned credit, optional context, and decision origin. Progress advances only after a successful save.

The screenshot displays the 'Educator Decision' interface. On the left, a list of suggestions is shown, each with a title, domain, confidence score, and a 'What the AI noticed' section. The suggestions are:

- 2.41 Follows simple one-step directions** (Language Receptive · Comprehension): Model uncertain, 0:02, unactioned. Options: Present, +/- Emerging, - Not observed, N/A N/A.
- 1.52 Looks for object that has fallen out of sight** (Cognitive · Object permanence): 94% confidence, 0:02, unactioned. Options: Accept draft, Edit, Note, Dismiss.
- 1.58 Stacks rings on post in any order** (Cognitive · Means-end): 88% confidence, 0:02, unactioned. Options: Accept draft, Edit, Note, Dismiss.
- 3.62 Walks independently across room** (Gross Motor · Locomotion): 97% confidence, 0:02, unactioned. Options: Accept draft, Edit, Note, Dismiss.

On the right, the detailed view of the selected suggestion '1.52 Looks for object that has fallen out of sight' is shown. It includes a video player (synthetic-observation.mp4), a table of child information, and an 'EDITING 4.68' section.

Child	Child 1001
Age	19 months
Context	IFSP: No
Status	AI draft

The 'EDITING 4.68' section shows the title 'Builds tower using two cubes' and the domain 'Fine Motor · Block construction'. It includes a timer (0:02) and a table for the educator credit:

+	+/-	-	N/A
Present	Emerging	Not observed	N/A

Below the table is an 'EDUCATOR NOTE optional' section with a text area containing the note: 'Observed after the second prompt.' At the bottom right, there are buttons for 'Dismiss', 'Discard', and 'Save decision'.

Example: Emerging is selected and the note records that the behavior occurred after the second prompt.

What to do

Select the final credit, add useful observation context, then choose **Save decision**. Repeat for every suggestion.

How to know it saved

The Unsaved changes message clears and the actioned count increases. A failed save preserves the edits and offers an explicit retry.

Do not leave unsaved work. Internal navigation pauses when edits are pending so the educator can save or deliberately discard them.

Check the assessment summary

Finish & review opens the server-derived summary. Finalization remains unavailable until every suggestion has an educator action.

Sanitized pilot sandbox. Real child data is disabled.

Accepted draft

+

1.58 **Stacks rings on post in any order**

Accepted draft

Traceability: each item retains its path, such as Scored independently or Accepted draft.

What to check

Read the included skills, confirm notes are appropriate, and make sure dismissed suggestions are not mixed into the included record.

Then continue

When the list matches the educator's intended assessment, select **Confirm final assessment**.

Confirm finalization

The confirmation repeats the included and dismissed counts and makes the read-only consequence explicit before anything is locked.

Read the confirmation

Verify the number of included skills and dismissed suggestions. The dialog states that educator decisions will be locked.

Choose deliberately

Select **Cancel** to keep editing, or **Confirm final assessment** to create the immutable record.

Expected result

A successful confirmation opens the finalized assessment for the same child and observation.

This is the point of no return. Do not confirm until the totals and included skills have been checked.

Use the finalized assessment

The final view identifies the child and observation, records who confirmed it and when, and presents the educator decisions as read-only.

Final state: Child 1001, observation Jul 11, 2026, confirmed by Alex Morgan in the sanitized pilot.

What is preserved

Credit totals, decision paths, domain summary, final skills, educator notes, confirmation identity, and confirmation time.

What to do next

Review the record as needed, then use **Return to child** to see it in the child's assessment history.

— COMPLETION CHECK

✓ The heading says Assessment finalized.

✓ The confirmation names the educator.

✓ The record is explicitly read-only.

✓ The final totals match the reviewed summary.

Walkthrough complete. The workflow has moved from a private observation to an educator-approved record without treating the AI draft as the final assessment.
