

— EDUCATOR WORKFLOW GUIDE

# Educator happy path

From an assigned child and private observation video to a human-approved, read-only assessment record.

SANITIZED PILOT WALKTHROUGH    DESKTOP WORKFLOW    JULY 22, 2026

The screenshot displays the 'Review AI suggestions' interface within the HELP AI Crediting Companion. At the top, a banner reads 'Sanitized pilot sandbox. Real child data is disabled.' The interface includes a navigation bar with 'Shine Early Learning' and 'HELP® AI Crediting Companion' logos, and a user profile for 'Alex Morgan'. The main section is titled 'ASSESSMENT REVIEW' and 'Review AI suggestions' for 'Child 1001 - 19 months - Jul 10, 2026'. A progress indicator shows '0 of 8 reviewed' and a 'Review summary' button. The central area lists three AI suggestions for review:

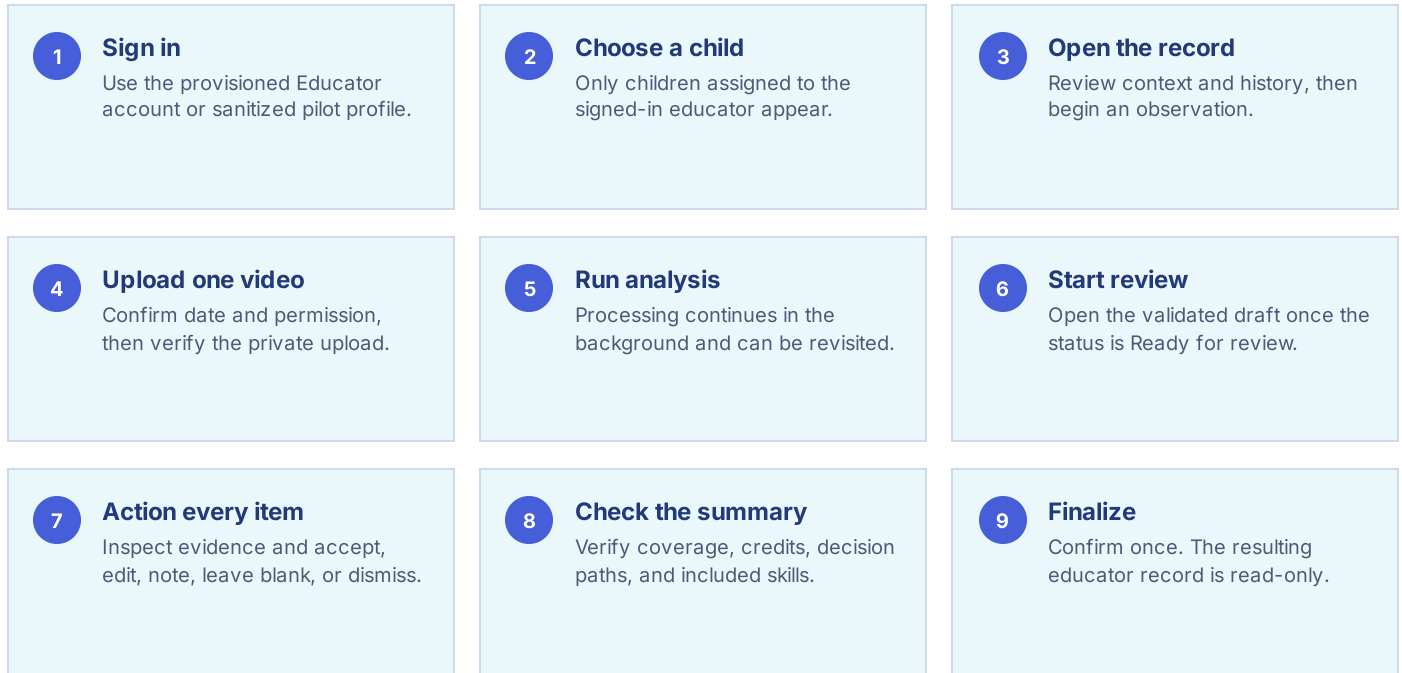

- 1.52 Looks for object that has fallen out of sight** (Cognitive - Object permanence): AI confidence: High, Primary - 0:02, Notreviewed. Buttons: Accept Present, Edit / add note.
- 1.58 Stacks rings on post in any order** (Cognitive - Means-end): AI confidence: High, Primary - 0:02, Notreviewed. Buttons: Accept Present, Edit / add note.
- 3.62 Walks independently across room** (Gross Motor - Locomotion): AI confidence: High, Primary - 0:02, Notreviewed.

Each suggestion includes a 'Why the AI suggested + Present' link. To the right, a video player shows a colorful abstract pattern with a timestamp of 0:00 / 0:03. Below the video, a 'REVIEW 1.52' section shows the AI suggestion and a 'Why the AI suggested + Present' explanation: 'The child immediately searches behind the container after the object drops.'

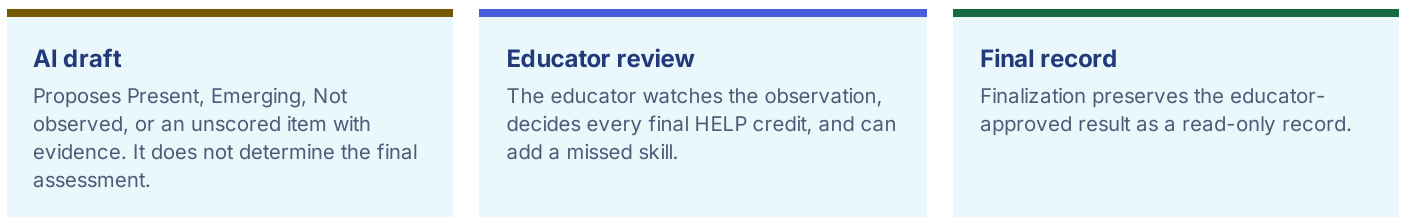

**i** All names, child identifiers, dates, results, and video content shown here are deterministic sanitized pilot data. Real child data is disabled in the captured environment.

# The journey at a glance

The application always exposes the next valid action. Educators select an assigned child, submit one private observation, review every suggestion, and deliberately lock the final record.

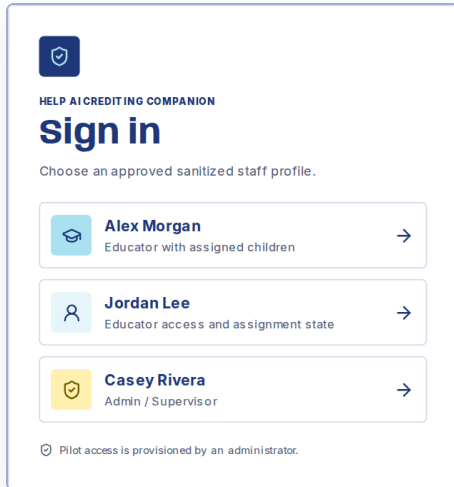

— DECISION OWNERSHIP

**Before starting:** confirm the child is assigned, processing permission is approved, and the observation is a supported MP4, WebM, or MOV file. The local pilot policy accepts one video up to 100 MB and five minutes.

# Sign in as an Educator

The captured sandbox uses approved staff profiles. A configured email/password environment instead shows the provisioned credential form.

HELP AI CREDITING COMPANION

## Sign in

Choose an approved sanitized staff profile.

- Alex Morgan**  
Educator with assigned children →
- Jordan Lee**  
Educator access and assignment state →
- Casey Rivera**  
Admin / Supervisor →

🔒 Pilot access is provisioned by an administrator.

## What to do

Select **Alex Morgan**, the sanitized Educator profile with assigned children.

## What happens

The server creates an Educator-scoped session and opens **Assigned children**. The session controls which children and assessments can be viewed.

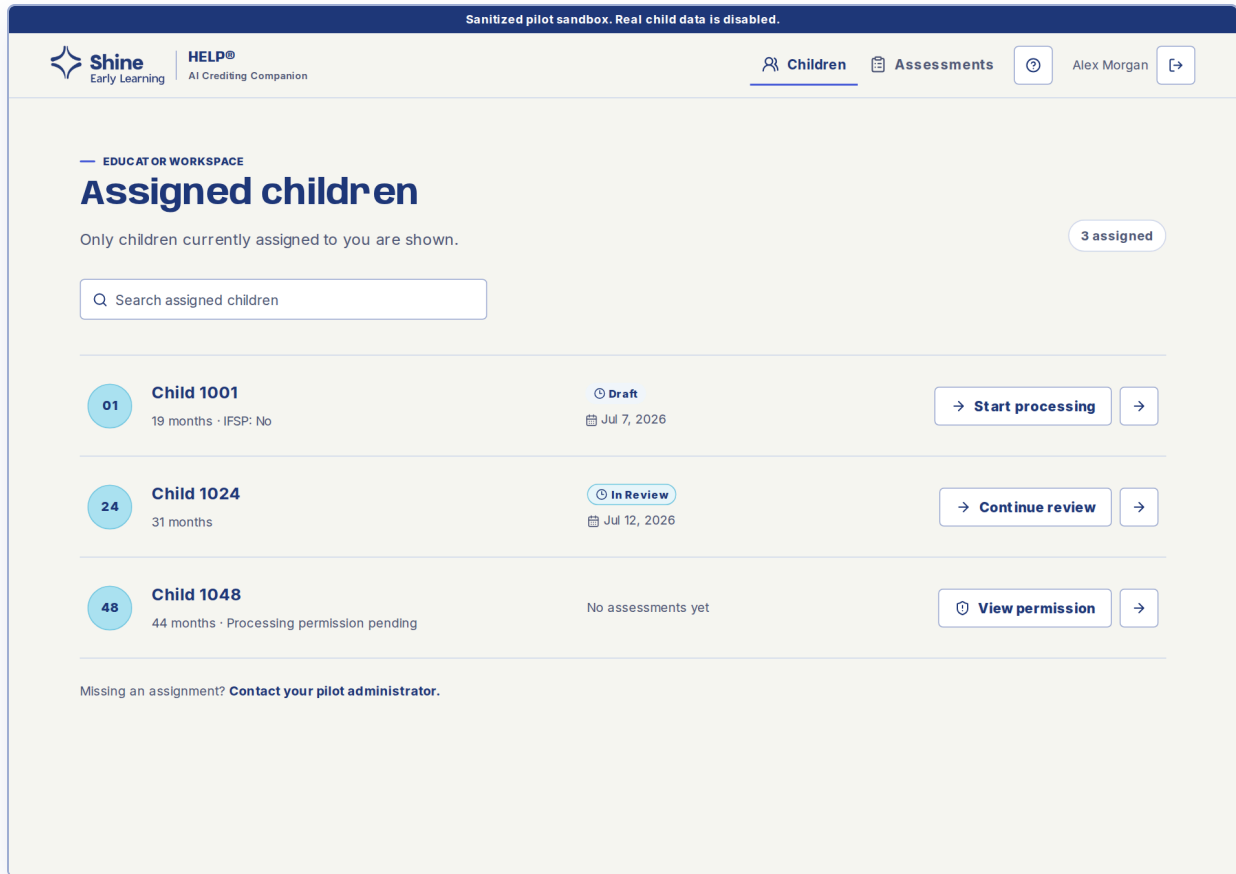

## Check before continuing

- Your name appears in the application header.
- The current navigation item is Children.
- The sanitized-data banner remains visible in the pilot.

**Access is provisioned.** There is no public signup path. Contact the pilot administrator when access or assignments are missing.

# Choose an assigned child

The first screen is a focused roster, not a dashboard. Each row shows the child's current assessment state and the authoritative next action.

**Example:** Child 1001 has a Draft, Child 1024 is In Review, and Child 1048 is waiting for processing permission.

## What to do

Use the local search when needed, then select **Child 1001** to open the child record. A status action can also resume the current assessment directly.

## What to check

Confirm the child identifier and context before proceeding. Only currently assigned children should be visible.

**Status-aware actions prevent dead ends.** Draft goes to intake, Processing goes to status, Ready for Review goes to review, and In Review resumes unfinished decisions.

# Open the record and begin

The child record keeps age, IFSP context, and assessment history together so the educator can orient before adding a new observation.

Sanitized pilot sandbox. Real child data is disabled.

HISTORY

**Assessments**

8 total

Observation Jul 7, 2026

Draft Start processing →

**Primary action:** Upload observational video starts a new assessment for this assigned child.

## What to do

Review the child header and recent history. Select **Upload observational video** when the new video belongs to this child.

## What the history tells you

Each assessment remains a separate dated record. Finalized observations also show age snapshots and changes from the prior assessment.

**Stop if the context is wrong.** Return to Assigned children instead of uploading an observation to the wrong record.

 **Shine**  
Early Learning

NEW OBSERVATION

**Upload observational video**

Add one short observational video for this assessment.

1 Observation details

|            |           |            |
|------------|-----------|------------|
| CHILD      | AGE       | PERMISSION |
| Child 1001 | 19 months | Approved   |

Observation date

07/07/2026

2 Observation video

— UPLOAD COMPLETE

 **synthetic-observation.mp4**

0.1 MB · private assessment video

Replace

Save and exit

Start processing

Private by default

The video is shared only with the authorized scoring service and assigned educator.

1 Upload verified

The file remains in this assessment draft.

2 Analysis runs

You may leave while suggestions are prepared.

3 Human review

You decide every final HELP credit.

**Ready state:** the date is locked, permission is approved, and the uploaded filename is shown as complete.

## What to do

Confirm child, age, permission, and observation date. After the video says **Upload complete**, select **Start processing**.

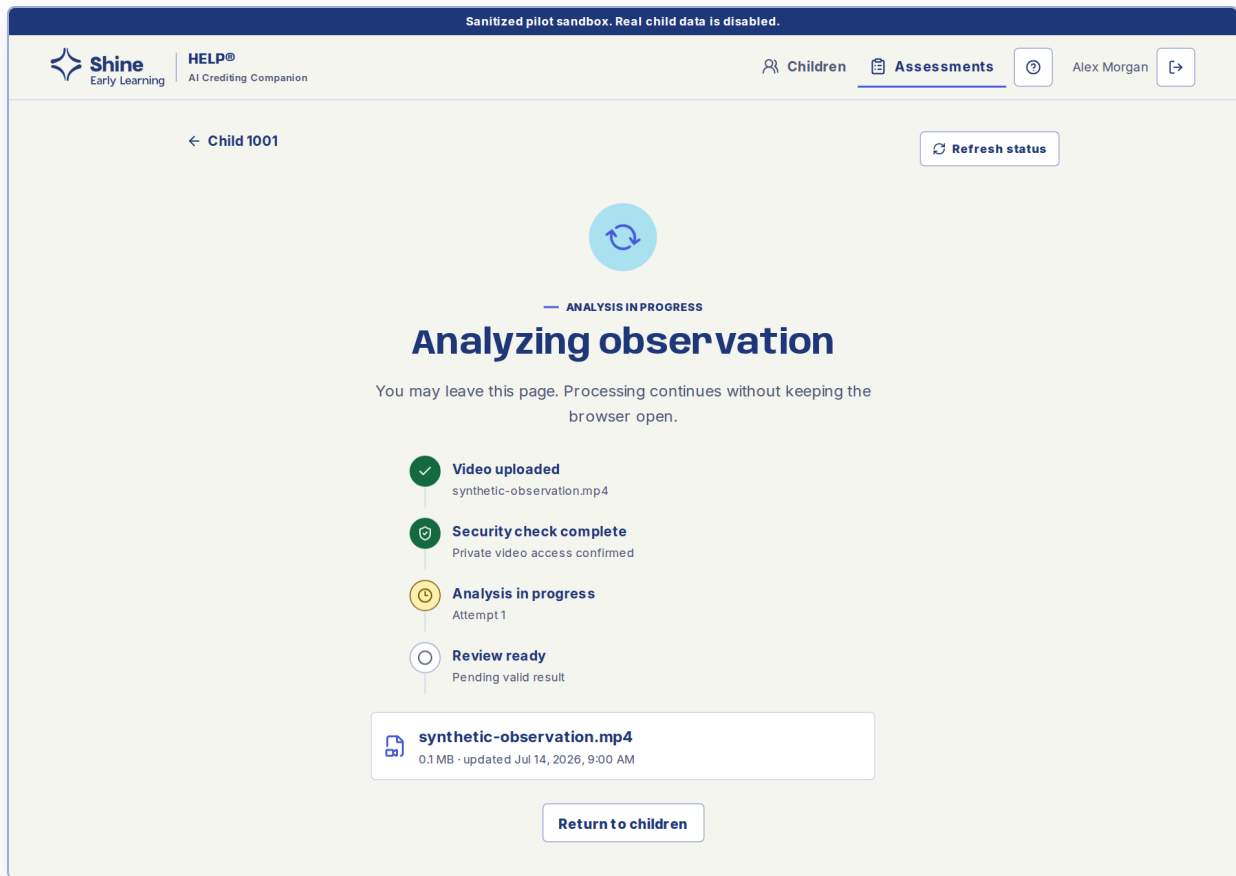

## Available controls

Replace or remove the uploaded video before processing. **Save and exit** keeps the verified draft for later.

**Private by default.** The video is available only to the authorized scoring service and assigned educator; it is not a public asset.

# Let processing run

The status page separates upload, security, analysis, and review readiness so progress is visible without implying success too early.

**Current state:** upload and security checks passed; analysis attempt 1 is still running.

## What to do

Wait for the page to update automatically, or use **Refresh status**. You may safely return to children while processing continues.

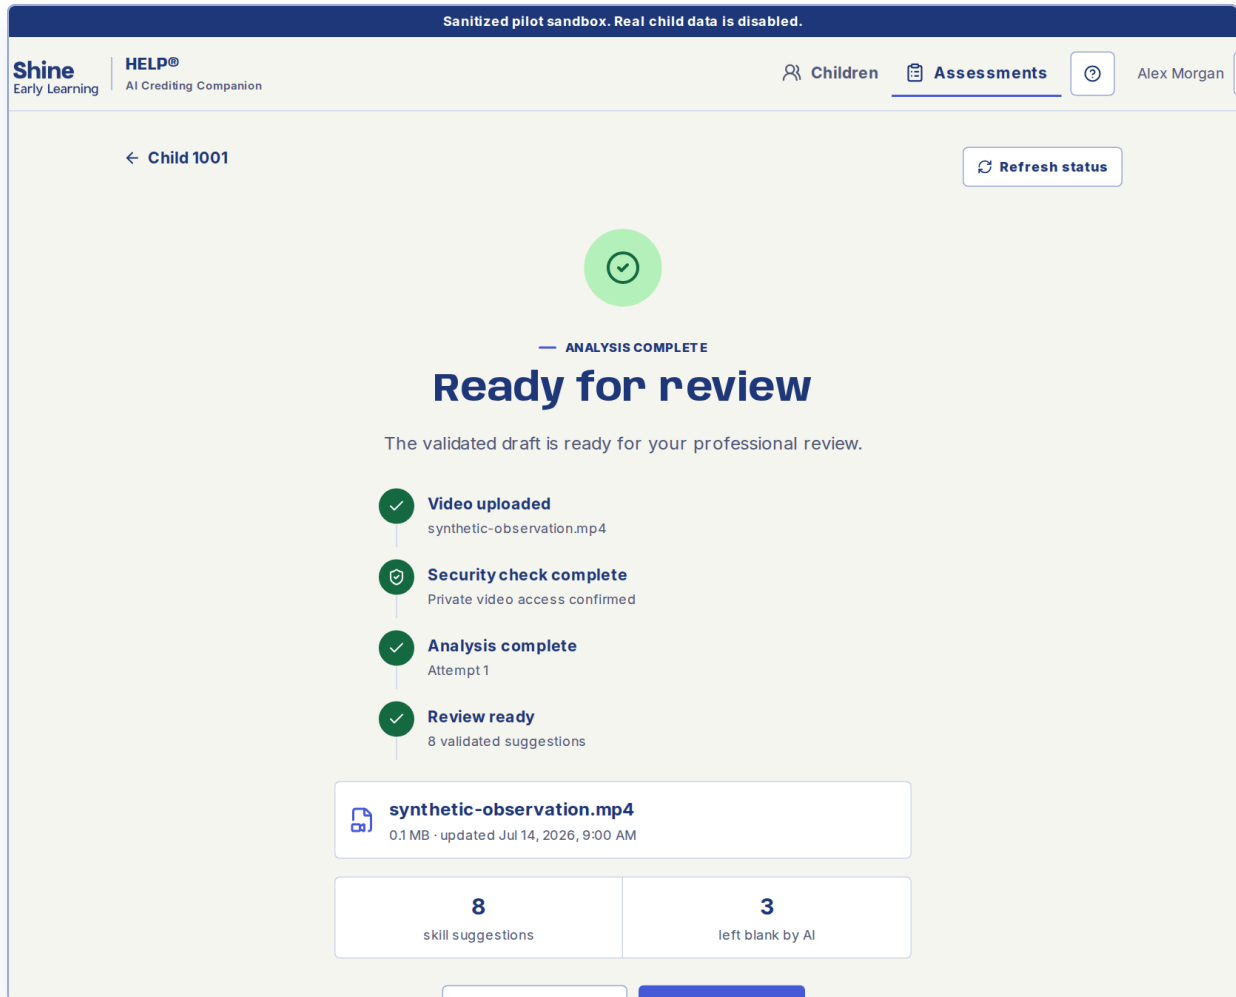

## What the system does

It preserves a processing attempt, validates the result, and exposes review only after an all-or-nothing valid result is ready.

**No open browser required.** Closing or leaving this page does not cancel analysis.

# Start professional review

A successful run reports the validated suggestions and draft-credit distribution before the review workspace opens.

**Example result:** 8 validated suggestions, including items the model intentionally left unscored.

### What to do

Select **Start review**. Returning to children remains safe if the review must happen later.

### What to check

All four milestones show complete: upload, security, analysis, and review readiness.

# Orient in the workspace

Suggestions are grouped by AI draft credit on the left. The secure video and active decision editor stay together on the right.

Sanitized pilot sandbox. Real child data is disabled.

# Inspect what the AI noticed

Evidence is collapsed by default. Open it only when needed, then use its short explanation and timestamp to verify the observation yourself.

The screenshot displays the 'Review AI suggestions' interface. At the top, there's a header with the Shine logo and 'HELP® AI Crediting Companion'. Below this, the 'ASSESSMENT REVIEW' section is visible, showing 'Review AI suggestions' for 'Child 1001 - 19 months - Jul 10, 2026'. The interface lists several AI suggestions, each with a title, category, and confidence level. For example, '1.52 Looks for object that has fallen out of sight' is categorized as 'Cognitive - Object permanence' with 'AI confidence: High'. A video player on the right shows a colorful, abstract scene with the title 'synthetic-observation.mp4'.

**Action:** open Why the AI suggested... under the current suggestion.

## Use evidence as a pointer

Seek to the indicated moment, watch enough surrounding context, and decide whether the behavior supports a credit.

## Model uncertain

An uncertain item has no proposed credit. The educator can choose Present, Emerging, Not observed, or Blank; N/A, Atypical, and the O concern flag remain educator-only choices.

**Professional judgment wins.** Evidence text helps locate the behavior; it does not replace watching the observation.

# Save the final credit

The editor records the educator-owned credit, optional O concern flag, context, and decision origin. Progress advances only after a successful save.

The interface is divided into two main sections. The left section lists three skills with their details and action buttons:

- 4.68 Builds tower using two cubes** (Fine Motor - Block construction): AI confidence: Not sure, Primary: 0:02, Not reviewed. Buttons: Leave blank, Edit / add note.
- 2.41 Follows simple one-step directions** (Language Receptive - Comprehension): AI confidence: Not sure, Primary: 0:02, Not reviewed. Buttons: Leave blank, Edit / add note.
- 6.22 Drinks from open cup with assistance** (Self-Help - Feeding): AI confidence: Not sure, Primary: 0:02, Not reviewed. Buttons: Leave blank, Edit / add note.

Below the skills list is a button: **+ Add a skill the AI missed**.

The right section is the decision panel for skill 2.41:

- REVIEW 1.52** (Changed to Emerging)
- Looks for object that has fallen out of sight** (Cognitive - Object permanence)
- AI SUGGESTION + Present** (AI confidence: High)
- Why the AI suggested + Present** (Primary moment: 0:02): The child immediately searches behind the container after the object drops.
- YOUR DECISION**: A table with four options: + (Present), +/- (Emerging), - (Not observed), and B (Blank). The +/- option is selected.
- N/A, atypical, or concern options**: A dropdown menu.
- EDUCATOR NOTE optional**: A text box containing "Observed after the second prompt."
- Buttons at the bottom: **Dismiss suggestion**, **Discard**, and **Save changes**.

**Example:** Emerging is selected and the note records that the behavior occurred after the second prompt.

## What to do

Select the final credit, add useful observation context, then choose **Save decision**. Repeat for every suggestion.

## Add anything missed

Use **Add additional skill** above the AI suggestion groups, then choose Domain/section, Strand, Skill, and Credit. The added skill is clearly attributed to the educator.

**Do not leave unsaved work.** Internal navigation pauses when edits are pending so the educator can save or deliberately discard them.

# Check the assessment summary

Review summary opens the server-derived totals. Finalization remains unavailable until every suggestion has an educator decision.

Sanitized pilot sandbox. Real child data is disabled.

INCLUDED RECORD

Final skills

**Traceability:** each item retains its path, such as Scored independently or Accepted draft.

## What to check

Read the included skills, confirm notes are appropriate, and make sure dismissed suggestions are not mixed into the included record.

## Then continue

When the list matches the educator's intended assessment, select **Confirm final assessment**.

# Confirm finalization

The confirmation repeats the included and dismissed counts and makes the read-only consequence explicit before anything is locked.

**Finalize this assessment?**

This creates the read-only human-approved record. Ordinary review edits will no longer be available.

- 8 included skills
- 0 dismissed suggestions
- All educator decisions will be locked

**Cancel** **Confirm final assessment**

## Read the confirmation

Verify the number of included skills and dismissed suggestions. The dialog states that educator decisions will be locked.

## Choose deliberately

Select **Cancel** to keep editing, or **Confirm final assessment** to create the immutable record.

## Expected result

A successful confirmation opens the finalized assessment for the same child and observation.

**This is the point of no return.** Do not confirm until the totals and included skills have been checked.

# Use the finalized assessment

The final view identifies the child and observation, records who confirmed it and when, and presents the educator decisions as read-only.

Sanitized pilot sandbox. Real child data is disabled.

**Final state:** Child 1001, observation Jul 11, 2026, confirmed by Alex Morgan in the sanitized pilot.

## What is preserved

Coverage, credit totals, decision paths, domain summary, final skills, educator notes, confirmation identity, and confirmation time.

## What to do next

Use **Download PDF** or **Print** when a portable record is needed, then return to the child's assessment history.

## — COMPLETION CHECK

✓ The heading says Assessment finalized.

✓ The confirmation names the educator.

✓ The record is explicitly read-only.

✓ The final totals match the reviewed summary.

**Walkthrough complete.** The workflow has moved from a private observation to an educator-approved record without treating the AI draft as the final assessment.
